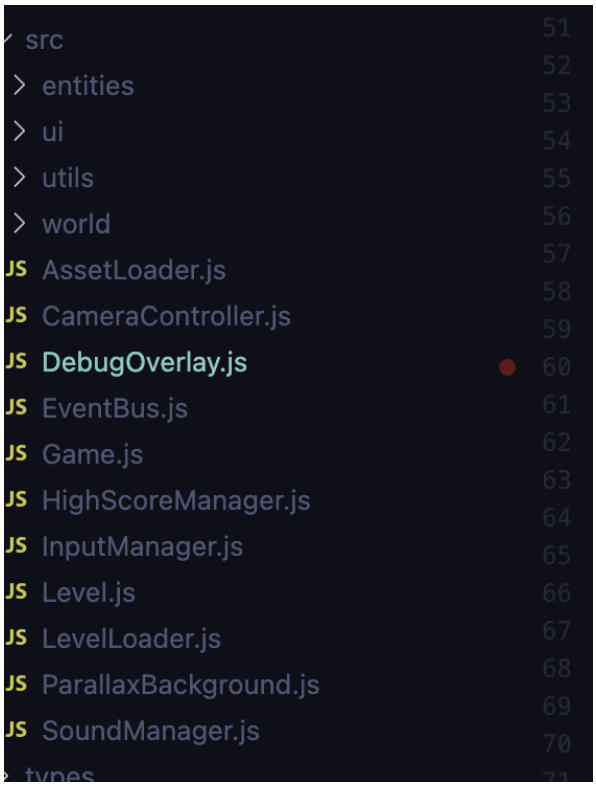
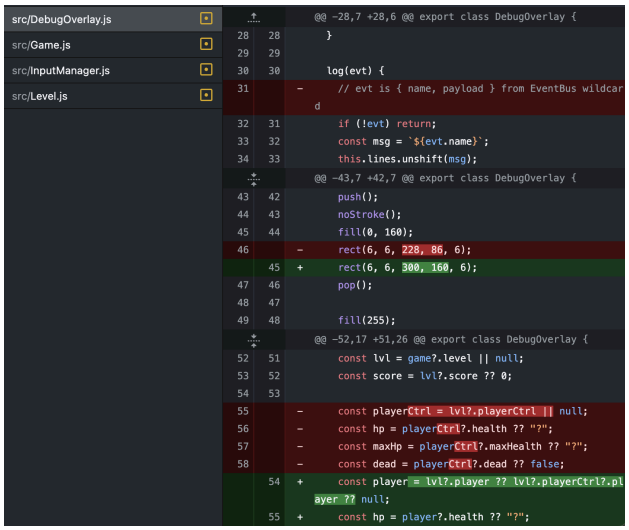
Process & Decision Documentation

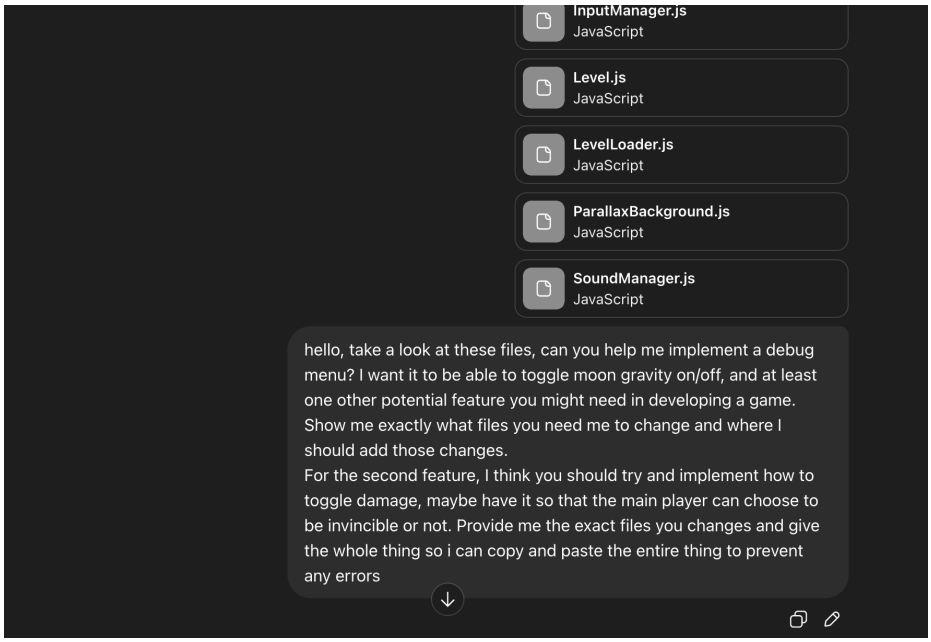
Side Quests and A4 (Individual Work)

For this side quest, I added a debug menu screen into the game from side quest week 6. For my two toggles I had an option to change gravity settings, and then to toggle invincibility for the player.

Role-Based Process Evidence







Goal of Work Session

- The goal of the work session was to implement and display a debug menu for the fox game. The debug menu should allow the player to toggle gravity and another feature. The feature I ended up choosing was invincibility.

GenAI Documentation

If GenAI was used (keep each response as brief as possible):

Date Used: March 23rd 2026

Tool Disclosure: ChatGPT 5.4

Purpose of Use: I used it to generate and alter the code that was provided to implement my design changes.

Summary of Interaction: It gave me full text for the code to copy and paste for each file that needed to be changed within the game folder.

Human Decision Point(s): I gave the AI what features to add, and I also told it to make sure to give the entire file to prevent any errors.

Integrity & Verification Note: I made sure to playtest the game and ensure that there are no errors or issues when running. Also made sure to see if the debug menu and controls were working fine still.

Scope of GenAI Use: I made the design changes and told the AI what to add and where to implement it into the code.

Verification & Judgement

- I made sure to do playtesting and check out all of the functions to ensure that everything was running without error or breaking.
